Calculator APP

Structure of Folder: Src-> main.ts & APP Folder-> app.component.ts & app.component.html & app.component.html

Main.ts

```
import { bootstrapApplication } from '@angular/platform-browser';
import { AppComponent } from './app/app.component';

bootstrapApplication(AppComponent)
  .catch((err) => console.error(err));
```

app.component.ts

```
import { Component } from '@angular/core';

@Component({
  selector: 'app-root',
  standalone: true,
  templateUrl: './app.component.html',
  styleUrls: ['./app.component.css']
})
export class AppComponent {

  title = 'calculatorapp';
  result: string = '';
  resultName = 'Result';

  add(firstNumber: string, secondNumber: string) {
    this.resultName = 'Add Result = ';
    this.result = (Number(firstNumber) + Number(secondNumber)).toString();
  }
```

```
  subtract(firstNumber: string, secondNumber: string) {
    this.resultName = 'Subtract Result = ';
    this.result = (Number(firstNumber) - Number(secondNumber)).toString();
  }

  multiply(firstNumber: string, secondNumber: string) {
    this.resultName = 'Multiply Result = ';
    this.result = (Number(firstNumber) * Number(secondNumber)).toString();
  }

  divide(firstNumber: string, secondNumber: string) {
    this.resultName = 'Divide Result = ';
    this.result = (Number(firstNumber) / Number(secondNumber)).toString();
  }
}
```

app.component.css

```
table{
background-color: #BB8FCE;border: 1px solid #110517 ; padding: 30px;
top: 30%;
left: 50%; position: fixed;
transform: translate(-50%,-50%);
}
button{
margin: 3px; width: 100px;
}
.center-content{ text-align: center;
}
```

app.component.html

```
<table>
  <caption><b>CALCULATOR</b></caption>

  <tr>
    <td>First Number :</td>
    <td>
      <input type="number" #firstNumber placeholder="First Number">
    </td>
  </tr>

  <tr>
    <td>Second Number :</td>
    <td>
      <input type="number" #secondNumber placeholder="Second Number">
    </td>
  </tr>

  <tr>
    <td></td>
    <td>
      <button (click)="add(firstNumber.value, secondNumber.value)">Addition</button>
    </td>
  </tr>

  <tr>
    <td></td>
    <td>
      <button (click)="subtract(firstNumber.value, secondNumber.value)">Subtract</button>
    </td>
```

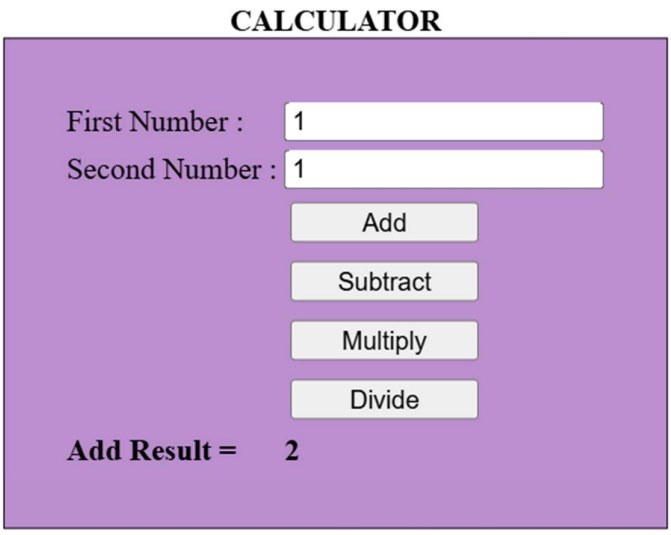

```
  </tr>

  <tr>
    <td></td>
    <td>
      <button (click)="multiply(firstNumber.value, secondNumber.value)">Multiply</button>
    </td>
  </tr>

  <tr>
    <td></td>
    <td>
      <button (click)="divide(firstNumber.value, secondNumber.value)">Divide</button>
    </td>
  </tr>

  <tr>
    <td><b>{{ resultName }}</b></td>
    <td><b>{{ result }}</b></td>
  </tr>

</table>
```
